INDIAN CENTRAL SCHOOL

A.T. Gate, Gaya Ji (Gaya - Sherghati Road, Bihar)

OFFICIAL ADMINISTRATIVE PORTAL OPERATIONS MANUAL

Comprehensive Guide for Portal Authentication, Content Management, Staff Delegation & Approval Queue Governance

Issuing Agency:	**SJ Enterprises / SJ Digitals** (Digital Architecture & Web Engineering)	**Portal Version:**	**v2.4 (Security Hardened)**
Authorized Recipient:	Director, Principal & Administrative Council — ICS Gaya Ji	**Release Date:**	October 30, 2026 (Academic Session 2026–27)
Production Domain:	**https://icsgayaji.org/admin.html**	**Offline Environment:**	http://localhost:8085/admin.html

Executive Handover Notice from SJ Enterprises:
SJ Enterprises is proud to deliver this upgraded, institutional-grade administrative control platform tailored exclusively for **Indian Central School, Gaya Ji**. This manual provides complete operational instructions for school administrators to manage all public digital assets—including urgent circulars, faculty records, academic achievements, and campus infrastructure—while delegating publishing duties safely to teachers via our newly engineered **Toggleable Approval Queue Engine**.

1. QUICK CREDENTIALS & ACCESS KEYS (STRICTLY CONFIDENTIAL)

Keep these credentials secure. Never distribute the master administrator passcode outside the executive board.

ROLE IDENTITY	USER IDENTITY	PASSCODE / KEY	CONTROL SCOPE & PERMISSIONS
School Administrator MASTER LEVEL	Director / Principal / IT Head *(Primary Console)*	**ics@2026** Default Admin Passcode	**Unrestricted Master Control.** Direct edits across all 5 modules, approve or decline staff proposals, toggle approval queue ON/OFF, reset teacher passcodes, review audit logs.
Teacher / Faculty DELEGATED LEVEL	Class Teachers, Academic Heads, Exam In-charges	**staff@2026** Default Staff Passcode	**Delegated Operations.** Create, edit, and delete notices or faculty records. When queue is ON, submissions require Admin approval. When OFF, publishes directly to live site.

Live Website Portal:	**https://icsgayaji.org/admin.html** (Official Production Admin Panel)
Offline Local Portal:	**http://localhost:8085/admin.html** (Safe offline sandbox powered by python3 server.py)

2. STAFF DELEGATION & THE TOGGLEABLE APPROVAL QUEUE

A cornerstone feature engineered into the ICS portal is the **Toggleable Admin Approval Queue**. School leadership requested the ability to empower teachers to submit circulars and directory updates, while retaining executive authority to decide whether submissions require administrative sign-off or publish directly to the live website.

OPERATING MODE	HOW IT WORKS	STAFF EXPERIENCE	ADMIN CONTROL
1. Approval Required (Queue Mode) **[DEFAULT & RECOMMENDED]**	Teacher proposals are quarantined in the **Pending Approvals Queue** in data/permissions.json. Live website is NOT touched until approved.	Save button shows: '*Submit for Admin Approval*'. Staff sees proposal in their tracking list with status '*Under Review*'.	Administrator receives pending badge, inspects proposed changes, and clicks **Approve** (goes live immediately) or **Reject** (with feedback note).
2. Direct Publish (Live Direct Mode) **[RAPID EVENTS MODE]**	Teacher updates bypass the approval queue and write **immediately** to the live website JSON datasets (data/notices.json, etc.).	Save button updates dynamically to: '*Save Notice Live*' or '*Post New Notice (Direct)*'. Updates reflect instantly.	**Complete audit visibility:** The system logs every staff action with actor name, timestamp, and details in the **Activity Audit Log** for review.

How the Administrator Can Toggle the Approval Setting at Any Time:

Step 1: Log in as **School Administrator** at /admin.html using passcode ics@2026.

Step 2: In the sidebar navigation, click on **'Approvals & Staff Control'**.

Step 3: Click on the **'Portal Security & Access'** sub-tab.

Step 4: Locate the card titled **'Require Admin Approval for Staff Updates'**:

- **TOGGLE ON:** Switches system to *Queue Mode*. Teachers cannot publish live without admin sign-off.
- **TOGGLE OFF:** Switches system to *Direct Publish Mode*. Teachers can post updates directly.

Step 5: The change takes effect immediately across all devices, updates the live badge, and is recorded in the permanent audit trail.

Granular Staff Permission Switches:

Beneath the approval toggle, administrators can selectively toggle permissions for individual modules. For example, you can allow teachers to post **Notices & Circulars** and update **Faculty Profiles**, while restricting access to **Campus Facilities** and **Advisory Committee**.

Emergency Portal Gatekeeper ('Teacher Login Allowed' switch):
If the administrator toggles off 'Teacher Login Allowed', all staff members are locked out of the portal instantly. Use this during summer vacations, examination grading periods, or security rotations.

3. MODULE MANAGEMENT & LIVE PUBLISHING GUIDE

The portal controls five core modules powering the public website:

MODULE NAME	LIVE LOCATION ON WEBSITE	KEY ATTRIBUTES & FEATURES
1. Notices & Circulars	Homepage Ticker, Spotlight Card & notices.html	Headline, Category (Olympiad, Academic, Parent Advisory, Media Press), Academic Session, Urgent Alert Tag, Description, and High-Resolution Circular Image.
2. Faculty Directory	faculty.html & Academics page	Teacher Name, Department, Academic Subject, Educational Qualifications (M.Sc, B.Ed, etc.), Bio, and Professional Photograph.
3. Hall of Fame / Awards	achievements.html & Homepage	Student Name, Competition Title, Medal / Award Category, Year, and Certificate / Trophy Photograph.
4. Campus & Facilities	facilities.html & Virtual Tour	Facility Name (Smart Classrooms, Science Labs, Library, Fleet GPS), Description, Features list, and Gallery Image.
5. Advisory Committee	about.html Leadership section	Committee Member Name, Institutional Designation, Academic Background, and Advisory Statement.

Spotlight: The Multi-Specialty Health Checkup Camp Notice

As part of this update, the **Multi-Specialty Health Checkup Camp** notice has been successfully published live to icsgayaji.org. It is highlighted with a **Urgent** badge and is synchronized across the top of notices.html, the JSON database (data/notices.json), and the homepage spotlight card in index.html. The original high-resolution banner is archived at assets/notices/checkupics.jpeg.

Standard Procedure to Post a Notice:

1. Click **'Notices & Circulars'** in the dashboard sidebar.
2. Click the gold **'+ Post New Notice'** button in the top right.
3. Enter the **Notice Title**, select the **Category**, and specify the **Session** (e.g. *Session 2026–27*).
4. Check **'Mark as Urgent'** if the notice requires immediate parental attention (creates a red emergency banner).
5. Attach an image: Either upload directly from your computer or provide a file path.
6. Click **'Publish Notice'** (if Admin or Direct Mode) or **'Submit for Admin Approval'** (if Staff in Queue Mode).

Moderating the Pending Approvals Queue (Admin Workflow):

1. Open **'Approvals & Staff Control'** → **'Pending Approvals Queue'**.
2. Pending proposals submitted by teachers display the teacher's name, target module, proposed title, and attached image.
3. To accept: Click **'Approve Proposal'**. The system automatically inserts or edits the live dataset, creates an audit entry, and updates the website.
4. To decline: Click **'Reject'**. Enter an administrative feedback note explaining what the teacher needs to adjust.

4. SECURITY GOVERNANCE & AUDIT LOGGING

To ensure institutional transparency and prevent unauthorized tampering, the portal incorporates several layers of enterprise security:

Permanent Activity Audit Log: Every single action performed in the console—including admin approvals, teacher direct posts, edits, deletions, and passcode updates—is permanently recorded in data/permissions.json. The log records the actor's name, assigned role, exact timestamp, action category, and detailed description.

Input Sanitization (Anti-XSS Engine): All text inputs (titles, summaries, captions, doctor names) are filtered through a robust HTML entity sanitization pipeline (escapeHtml) that neutralizes script injections, quotes, and malicious tags before rendering.

Passcode Protection & Rotation: The administrator can change the staff passcode at any time directly in the console. Updating the passcode immediately applies to all teachers across all devices without needing to touch server configuration files.

Zero Plaintext Secret Exposure: Administrative hints (such as Default: ics@2026) have been hardened so they are automatically hidden on public production domains (icsgayaji.org) and only visible in local offline development.

Local Testing Safety Net (server.py): The included Python backend (server.py) allows school administrators to preview, test, and verify complex updates on a secure offline computer before publishing them to the public internet.

Sample Activity Audit Log View (as seen in Admin Dashboard):

TIMESTAMP	ACTOR & ROLE	ACTION PERFORMED	DETAILS & METADATA
2026-10-30 13:00	**Dr. Mirdula Kumari** Teacher / Staff	**Notice Published (Staff Direct)**	Annual Science Exhibition 2026 [Direct publish by Dr. Mirdula Kumari]
2026-10-30 12:45	**School Administrator** Administrator	**Approval Requirement Changed**	Teacher updates will now publish directly to live website without queue
2026-10-30 10:55	**School Administrator** Administrator	**Notice Added**	Multi-Specialty Health Checkup Camp notice published live

CERTIFICATE OF SYSTEM HANDOVER & ENGINEERING CONFORMANCE
This administrative portal, documentation, and underlying data structures have been designed, hardened, and formally verified by **SJ Enterprises / SJ Digitals**. All systems conform to institutional web safety standards, zero-downtime static delivery, and modern responsive design guidelines.
